

22 December 2021

## Recommendations of the Finnish Institute for Health and Welfare and the Ministry of Education and Culture for universities, universities of applied sciences and providers of general upper secondary education, vocational education and training, liberal adult education and basic education for adults during the coronavirus epidemic

These recommendations is replaced by the recommendation of 1.3.2022 Recommendations for universities, universities of applied sciences and providers of general upper secondary education, vocational education and training, liberal adult education and basic education for adults.

- **These recommendations replace the recommendations issued on 12 October 2021.**

Updated on 4 January 2022:

- **The statute number of the Act on Temporarily Amending the Communicable Diseases Act was added to the recommendations.**

### Legislation and powers

Under section 40 of the Act on General Upper Secondary Education (714/2018), section 80 of the Act on Vocational Education and Training (531/2017), section 31 of the Universities of Applied Sciences Act (932/2014) and section 41a of the Universities Act (558/2009), students have the right to a safe learning environment.

Under section 6 of the Communicable Diseases Act (1227/2016), central government authorities and expert agencies as well as municipalities and joint municipal authorities must systematically combat communicable diseases and prepare for healthcare incidents and emergencies. They must take immediate action once they have been informed of an outbreak or risk of an infectious disease that requires prevention measures in their area of operation.

Under section 8 of the Communicable Diseases Act, the regional state administrative agencies coordinate and supervise the prevention of infections in their area. The joint municipal authorities for hospital districts guide and support municipalities as well as healthcare and social welfare units in the prevention of communicable diseases, work regionally to develop the diagnostics and treatment of communicable diseases, and

investigate epidemics together with municipalities. The regional state administrative agencies and the joint municipal authorities for hospital districts within each agency's operating area collaborate in the prevention of communicable diseases. The regional state administrative agencies make the administrative decisions laid down in this Act by making use of the expertise of the joint municipal authority of the hospital district, the specific catchment area, and the Finnish Institute for Health and Welfare.

Under section 9 of the Communicable Diseases Act, municipalities are responsible for organising the work to prevent communicable diseases within their area as part of public health work, as laid down in the Primary Health Care Act (66/1972), in the Health Care Act (1326/2010) and in the Communicable Disease Act. The actions to prevent communicable diseases encompass the prevention, early detection and monitoring of communicable diseases, measures needed to investigate or prevent an epidemic, and the examination, treatment and medical rehabilitation of persons who have a communicable disease or are suspected of having one, as well as the prevention of treatment-related infections.

Under section 58, subsection 1 of the Communicable Diseases Act, the municipal body responsible for the prevention of communicable diseases may, within its area of operation, decide to close healthcare and social welfare units, educational institutions, early education centres, dwellings and similar facilities as well as prohibit public gatherings or public events when a generally hazardous widely spreading infectious disease or a disease that is justifiably suspected of being generally hazardous has been detected or is justifiably expected to occur. A further condition is that such measures are necessary to prevent the spread of a generally hazardous infectious disease or a disease that is justifiably suspected of being generally hazardous. The regional state administrative agencies may make similar decisions in their operating area, when the decisions are needed for an area covering several municipalities.

In principle, the general restrictions on gatherings do not apply to teaching and other statutory activities of educational institutions. educational institutions that organise public events must comply with the recommendations of the Government on the restrictions in force related to gatherings and the decisions of the regional state administrative agencies regarding public events in accordance with the Communicable Diseases Act.

### **Obligations under the Communicable Diseases Act to prevent the coronavirus epidemic from spreading**

The temporary provisions of the Communicable Diseases Act on measures to prevent the spread of the COVID-19 epidemic (Act on Temporarily Amending the Communicable Diseases Act 1221/2021) will remain in force until 30 June 2022.

Section 58c of the Communicable Diseases Act also places obligations on education providers. Section 58c consists of provisions on the obligations to prevent the spread of coronavirus in different activities. The obligations are directly in force under the Act

and do not require a separate decision by the authorities. Obligations under the section include the obligation to make sure:

- those working in educational institutions are given opportunities to clean their hands;
- those in educational institutions are given instructions on how to keep an adequate distance, hand hygiene practices and other similar practices to prevent the spread of infections;
- to organise more intensive cleaning of the premises and surfaces in addition to provisions issued elsewhere on cleanliness related to the activities in question; and
- those in educational institutions use the premises in a spacious way, taking into account the specific characteristics of the activity in question, and any customer seating is arranged sufficiently far apart.

The guidelines for action can be executed in the most expedient way, for example by means of public announcements, written instructions, signposting, signs indicating how to use the premises, or any other effective ways.

Under the Communicable Diseases Act, each regional state administrative agency and municipality monitors compliance with the COVID-19 obligations and restrictions and relevant decisions in their respective areas. The regional state administrative agencies and municipalities may inspect the activities of the operators they supervise and the premises used in their operations and stipulate measures to remedy shortcomings and drawbacks.

In the case of activities organised by education providers, those responsible for managing the premises are also responsible for giving guidance and opportunities for hand washing for those using the premises in the evenings and at the weekend. Guidance should be given on keeping safe distances, hand cleaning practices and other practices to prevent the spread of infections. If the activities are ones of an external operator organising activities under a lease agreement with the service provider, the provider and the lessee can agree between themselves how to implement the obligations governed by section 58c of the Communicable Diseases Act. The operator of the actual activities is responsible for ensuring that the obligations are properly implemented. The responsibilities of educational institutions do not extend to facilities available to or leased to other operators, such as student organisations, student unions and student associations, and student canteens.

## **Purpose of the recommendations**

The purpose of these recommendations is to support universities and universities of applied sciences as well as providers of general upper secondary education, vocational education and training, liberal adult education and basic education for

adults to carry out teaching and other activities organised in the premises of educational institutions safely during the COVID-19 epidemic. By following the recommendations, the risk of infection can be reduced in educational institutions.

### **Do not take part in instruction and other activities organised in educational institutions if you have symptoms of illness**

Coronavirus causes a respiratory infection. The symptoms may include a cough, sore throat, fever, shortness of breath (dyspnoea), muscle pain (myalgia), abdominal symptoms and headache.

If a student or teacher has any symptoms of illness, they must not participate in contact teaching or other activities organised on the premises of an educational institution. Nor must others working in or visiting the premises of an educational institution enter the premises of an educational institution if they have any symptoms of illness. Anyone who becomes ill during the day must leave the educational institution immediately or move to a separate space.

[Instructions on how to apply for a coronavirus test are available on the website of the Finnish Institute for Health and Welfare.](#)

If a student living in the dormitory of an educational institution becomes ill, the institution may contact, where necessary, the unit responsible for communicable diseases in the municipality of the educational institution in order to evaluate the situation and to assess what measures are necessary.

### **Risk groups**

It is particularly important for those at risk to take care of their vaccination coverage. Two doses of vaccine provide excellent protection against a severe form of coronavirus.

For those working in educational institutions, the measures are based on a risk assessment carried out by the employer. Occupational healthcare supports employers in the risk assessment.

## **Transmission of coronavirus**

Coronavirus is primarily transmitted as a droplet and contact infection when a person coughs or sneezes. The coronavirus can also spread through the air in the form of small aerosols in indoor spaces that have poor ventilation. Coronaviruses do not survive for long periods in the air or on surfaces of varying temperatures. It is possible that the virus might also be transmitted through physical contact. No cases of transmission of the infection through goods have been detected.

## **Ensure sufficient distancing**

The coronavirus is mainly transmitted by respiratory droplets. Situations in which people are in direct contact with one another should be avoided in educational institutions (section 58c, subsection 2 of the Communicable Diseases Act). If necessary, the education provider and the unit responsible for communicable diseases in the municipality where the educational institution is located can provide further guidance on practical measures.

If teaching is organised for a large number of participants (such as lectures for large numbers of participants), remote connections should be used. When people other than students and staff are present in educational institutions, they must be instructed to follow the guidelines on hygiene and respecting distancing.

The national mask recommendations issued by the Finnish Institute for Health and Welfare do not apply to the education sector. It is advisable to follow the recommendations on the use of face masks issued by regional and local authorities. Taking into account the epidemiological situation, these recommendations may complement the national recommendations on face masks. Under the legislative acts governing their activities, education providers are responsible for the safety of the learning environment and, for this purpose, may issue their own recommendations on the use of masks in facilities where teaching and examinations take place. For this reason, more specific recommendations on the use of masks in educational institutions may vary by region.

For example, student canteens or other eating areas can be used in turns to avoid unnecessary close contact and keep sufficient distancing. Proper hygiene should be ensured when preparing and distributing food as well as during meals.

Students can live in shared rooms in dormitories connected to educational institutions. The educational institutions should keep records of each person who has used their accommodation on a room-by-room basis so that infections can be traced later, if necessary.

## **Good hand hygiene and respiratory and cough hygiene prevents infections**

Proper hand hygiene and respiratory and cough practices prevent infections. To raise awareness, it is recommended that information material on the right practices be distributed to those working and studying at educational institutions.

- When in an educational institution, it is recommended you wash your hands whenever you come in after you have been out, before meals, always after sneezing or coughing, or if your hands are visibly dirty. Use disposable paper towels to dry your hands.
- If you cannot wash your hands, you can use an alcohol-based sanitiser. Hand sanitisers should be readily available.
- When sneezing or coughing, place a disposable handkerchief to cover your mouth and dispose of it immediately after use. If you do not have a handkerchief, cover your mouth with your upper arm near your inner elbow. Then wash your hands.

## **Cleaning and ventilation**

The cleaning of facilities and surfaces are enhanced in line with section 58c of the Communicable Diseases Act. Slightly alkaline all-purpose cleaners should be used when cleaning. You can use disinfectant to step up cleaning in sanitary facilities. When cleaning, comply with the guidelines on cleaning issued by the Finnish Institute of Occupational Health.

Separate guidelines on ventilation issued by the Finnish Institute for Health and Welfare should be taken into account when using the premises of educational institutions.

- Wipe contact surfaces such as door handles, armrests, desks and tables, light switches and taps at least once a day, preferably twice a day.
- It is recommended that shared work or study equipment always be wiped clean after use between users.

## **If a coronavirus infection is diagnosed in an educational institution**

Under the Communicable Diseases Act, a physician responsible for communicable diseases in the municipality or hospital district is in charge of investigating transmission chains. If a student or a person working in an educational institution is diagnosed with COVID-19, action is taken to examine whether an exposure has occurred. Those who might possibly have been exposed to it are traced and, by virtue of the Communicable Diseases Act, quarantined. Based on the instructions given by a physician specialised in communicable diseases, those infected with COVID-19 must therefore stay away from the educational institution.
